

DLP FILTER SERIES

DIGITAL LOW PROFILE SLIM FILTERS

EMOLUX
Where Image Matters

SLIM FILTERS EXCLUSIVELY for DSLR LENS

Digital Low Profile (DLP) filters represent the new generation of filters designed specifically for usage on DSLR lenses.

New engineered **slim filter frame** is **lighter** than standard frame and prevent lens vignette (darken of 4 corners) to appear in the pictures when mounted on wide angle lens. Incorporation of **anti-reflection** matt black finishing **minimizes stray light reflection** to appear on digital images.

Ultra Clear Glass is used to attain high level of **image sharpness** and clarity with over 90% of light transmission. Glass edges are polished and darken to reduce flare and ghosting under extreme bright or sunny conditions.

ULTRA CLEAR GLASS

- Produce sharp and clear images
- Over 90% in light transmission
- Reduce glare and ghosting with black anti-reflection paint on polished glass edges

LOW PROFILE SLIM FILTER FRAME

- 20% lighter than standard frame
- Smooth rotation when mounted onto DSLR Lens
- Prevent vignette at 4 corners when using wide angle lens
- Front threads to add other filters or lens cover

ANTI REFLECTION FINISHING

- Reduce light reflection with matt black professional finishing on filter frame
- Increase picture clarity with reduce stray light reflection
